

A workspace for the pace of business.

MicroDB makes it easy to set up, operate, and scale custom workspaces for any team. Centralize data and streamline processes for more control so your team can focus on what matters.

What is MicroDB?

MicroDB is a cross functional workspace where you can manage work your way. Teams collaborate using applications that are fully customizable so they can adapt and succeed. Customizing applications is quick and easy using intuitive tools, not writing code. MicroDB offers a friendly user experience so your whole team will feel empowered to build what they need when they need it.

We offer many customizable prebuilt applications so you can start immediately. To start from scratch, use our [guide on how to build your own applications](#) for that truly bespoke experience.

Managing your team is easy and you can even service your customers with the Helpdesk feature.

How it works

With MicroDB applications are easy to build, flexible and require very little time to create. The process of building new applications involves tools that are easy to use. With these tools you configure tables for storing data. Then MicroDB auto generates user screens for the tables and data.

If you can make a spread sheet, you can make a powerful custom business application. We offer several application templates to get started quickly or you can start from scratch.

Customer Relationship Management

Paying too much for a heavy, complicated CRM? Ease your mind and your budget with light, easy-to-use templates for your sales pipeline and more.

Helpdesk

All you need is a simple way to support your customers, right? Why pay for extras you'll never use? Our helpdesk feature is just the ticket.

Project Management

Tired of overblown, expensive PM software? MicroDB makes it easy with customizable project and task management templates.

Job Recruiting

Managing applicants and interviews shouldn't require yet another expensive membership. Access all your data in one place at MicroDB.

Small Business Budgeting

Quickly set up budgets. Give access only to those who need it. Easily customize our budget template to meet your needs.

...plus more

Whether you're planning an event, creating contact lists, or starting a small business, create exactly the applications you need for a price you'll love.

Why MicroDB?

Spreadsheets and email scatter data and fall short of a unified experience. Other application builder platforms make you level up into pay plans that include tools and services you may not use.

We help you be competitive. Our Mission is more than simply improving productivity, saving time and money. Our Mission is about empowering people to create tools they need when they need them.

Custom applications in minutes

No experience required

Ready-to-go templates

Managed infrastructure

Scalable

Intuitive interface

File storage

Helpdesk

Automated backups

Best-in-class security and encryption

Make your work day easier.

Create custom solutions your way on a business centric platform.

A powerful workspace with an intuitive toolkit

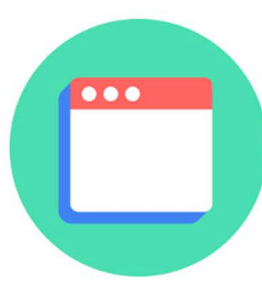

More powerful than spreadsheets, and more flexible and easier to use than off-the-shelf software, MicroDB is fast, customizable, and IT approved.

Take your team to new destinations by empowering them with tools they can use.

Custom Applications

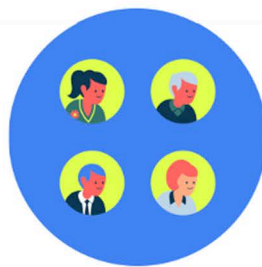

MicroDB applications are easy to create, flexible, and scalable. Choose from a variety of data types, link data, and even makes changes on the fly. Changes are smooth and without interruption to your application.

Team Management

Make MicroDB your team's workspace. Store files, manage projects, assign and execute tasks all on one site using our intuitive application builder.

With role-based access control, you can give team members access to specific applications and assign permission sets. Create your own roles unique to your process.

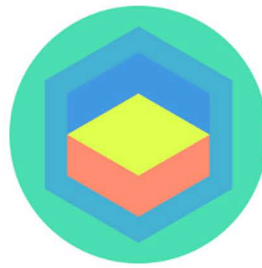

Helpdesk

MicroDB offers an easy helpdesk solution to open, track, and assign tickets. For about the same price as one customer support servicing package you can have our customizable helpdesk plus your other applications, all on one site.

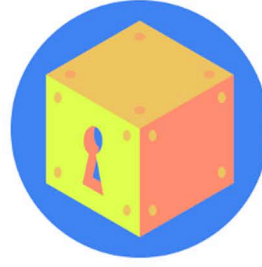

File Storage

File storage alongside your applications makes it easy to stay organized in one place. We regularly measure and evaluate performance to ensure uninterrupted service and data reliability.

Fully managed and safe

You have more important things to do than worry about your business critical data. We take care of it for you. Using best-in-class security and encryption we host and backup your applications, files, and data which are all encrypted at rest.

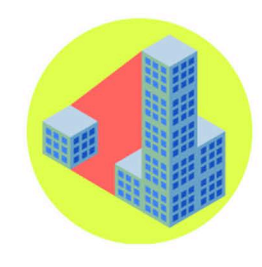

Import/Export

Sometimes you just need to look at things in a spreadsheet. Or add a big batch of data. Both import and export are always available using standard csv format.

Scalable

MicroDB grows as you grow. Our powerful data management solution is built on world-class technologies so that your applications scale automatically.

API

Easily extend your applications with our developer API. Use custom connectors to integrate with bespoke or legacy systems.

Solutions that Evolve

MicroDB applications are fully customizable solutions to everyday business challenges. Choose from a variety of application templates and adapt them to your unique process. MicroDB applications give teams a collaborative workspace so they can stay agile and keep adding value to your business.

Customer Relationship Management (CRM)

You shouldn't need to go to a special "university" to be able to use your CRM. Why pay extra for features you'll never use? Building your sales pipeline, tracking leads and opportunities is easy using our simple lightweight templates.

Project Management

Organizing an event, managing multiple clients or products? Software to help keep your team on task is vital. Whether you use Agile, Scrum, Waterfall or other project management framework, MicroDB has you covered. Our fully customizable templates make it easy to create applications that fit your methodology and preferences.

Job Recruiting

Finding talent is complex and challenging. It is easy to get buried in tons of emails or lose track of where an applicant is in the process. Our job recruitment template helps you take back control so you can focus on finding the right candidate to grow your business.

Small Business Budgeting

Create and manage your finances easily with our small business budgeting template that tracks income, expenses, and salaries against your budget. Easily import data from Xero using our integrated connector (more connectors in development).

Helpdesk

MicroDB offers an easy helpdesk solution to open, track, and assign tickets. For about the same price as one customer support servicing package you can have our customizable helpdesk plus your other applications, all on one site.

...plus more

There is no limit to what you can do with MicroDB. We currently offer templates for sales pipeline, crm, marketing campaigns, project management, contact lists, job applicant tracking, small business budgeting, product catalog, and conference planning. You can customize any one of these or start with a blank slate and create something completely new.

For Developers

MicroDB provides Backend as a Service for your cloud based applications. We give you tools to quickly build relational databases that scale. MicroDB auto generates screens for your databases so you can start using them immediately. All without writing a single line of code.

Work 10x smarter and 10x faster

Get more done in less time. MicroDB does all of the cloud configurations, provisioning, backups, monitoring, auto scaling, database management, deployments, and security. You get more time to build awesome applications that change the world.

Use Cases

These are the 3 main use cases that you should know about.

Automated Back End

Quick to set up, easy to use. MicroDB instantly generates the database and back end user applications for your cloud based solutions. Automate time-consuming tasks such as infrastructure provisioning, database setup, helpdesk response, global distribution, and backups.

Simple, scaleable APIs

Every application you build on MicroDB gets a custom generated REST API. Focus your energy on the front end by leveraging MicroDB as the database for your Serverless applications. Our back end as a service (BaaS) gives you worry-free, managed data so you can keep creating leading-edge user experiences.

Supplement Development

Save time building common applications. Choose from one of our templates or build one from scratch. Easily customize, adapt or expand your backend as needed. Deploy a single, distributed database that spans as many cloud regions as you need and provide low latency.

Features

Build Quickly

- Applications On Demand
Set up in minutes.
- No programming skills Required
Use an intuitive interface to configure and manage applications.
- Cloud Storage
Store, search, and serve files.
- Realtime Data
Store and sync app data with low latency.

Fully Managed

- Managed Infrastructure
Focus on your business not managing servers.
- Fully Hosted
Data and applications are served from the cloud.
- Security & Encryption
Best in class security and encryption ensures your assets are safe. Data is encrypted at rest.
- Automatic Scaling
As usage grows your applications are ready.
- Monitoring
We routinely measure and evaluate performance to ensure high availability.
- Automatic Backups
Data, applications, and files are routinely backed up for easy restoration.

Grow Business

- Template applications
For common business solutions.
- Import or export is easy
Use CSV files or your own custom connectors.
- Role Based Access Controls
Control access to your data with user roles.
- Developer API
Seamlessly extend app capabilities or use custom connectors to connect to custom or legacy systems.
